I participated in study tour of 3 days on January 09,10 and 11. Main purpose of tour is to send in the revival situation of Fukushima after tsunami and nuclear disaster to the whole world. This tour is very valuable, really fun and I gathered more information about the Fukushima. In first day we visit “Fukushima Oyasuba historical park”. They give the introduction about the recover from the impacts of the nuclear power station accident.

Then we visited “Abukuma cave” and decorated my own enobori (flag). It was an enjoyable time and could learn about Japanese history and traditional things. We stayed night at traditional hotel. It also different experience for us. Different Japanese foods and drinks, living in a traditional hotel, their cultural things, and language will be memorable things in my Japan life.

In second day morning we visited to “Nanko park and Nanko shrine”. Then we had an experience of “sagawa daruma workshop”. Then we enjoyed with “Iwaki day cruise and Iwaki la la mew”. It was a nice experience in traveling by boat in sea. Then we can gain knowledge about the tsunami disaster and different kind of fish at “aquamarine, Fukushima”.

In third day morning we visited “Minamisoma solar agri park”. We could learn about the facility which serves the role of supporting children’s growth and the various efforts in place to promote renewable energies. Then we visited “Soma city response” and “memorial centre” and “Fukushima prefectural fisheries experimental station”. Finally we could visit to “Wada tourism strawberry association”. We could eat strawberry as much as possible within thirty minutes.

We participate in this study tour and spend cored three days, and through this tour we enjoyed a lot and make new foreign friends. I think that it becomes memorable memory throughout my life.
